

Practical 03 Group 40 - Gokul O S

Customer

- Copied CUSTOMER, PLACE tables from branches 2, 4, and 5 directly into staging tables.
- Created separate, cleaned, normalized, and deduplicated tables for each branch.
- Combined these into a unified customer dimension table, created a mapping table containing the branch name, original ID, and the newly created ID for identification.

Product

- Copied PRODUCT tables from branches 2, 4, and 5 directly into staging tables.
- Created separate, cleaned, and normalized tables for each branch.
- Combined these tables into a unified table, Created a mapping table containing the branch name, original PID, and the newly created PID.

Sales Data Calculation

- Created cleaned tables for each branch with extracted sales data.
- Developed a unified SQL query to calculate turnaround and sales volume (in liters) across all branches.

Branch 2

- Products and Buys tables contained relevant sales data.
- **Things did:**
 - Converted the "amounts" column in the Buys table from string (varchar) to numeric format by analysing the data.
 - Converted price data from varchar to numeric format.

Branch 4

- Product, Item, and Order tables contained relevant sales data.
- **Things did:**
 - Converted the "SIZE (liter)" column in the Product table from string (varchar) to numeric format.

Branch 5

- Order, Orders, and Product tables contained relevant sales data.
- Things did:** All data were already in the correct numeric data types; no conversion required.
